

Webex Secure AI Agent Marketplace

Cisco builds the **first enterprise-grade AI Agent Marketplace** where any third-party developer can host AI agents inside Webex under strict Cisco-defined security, data, and UX rules — like Apple/Google enforce for iOS/Android apps, Cisco enforces for AI agents in Webex. Developers build, Cisco certifies, admins control, users benefit.

Developer Journey

Admin Journey

User Journey

BUILD /
CONFIGURE

Task Executor
Data Retriever
Notification
Sender

4 **Build Agent Logic**

Webex Meeting
API:
transcription,
context, user
data
A2A Protocols:
external tool
integration
Declare: data
needs ·
permissions ·
allowed actions

5 **Test in Webex Sandbox**

Simulated
meeting ·
Tests: latency
· accuracy ·
error handling
· load
performance

6 **Submit Agent for Certification**

Agent code +
config + docs
uploaded to
Cisco
certification
pipeline

7 **Cisco Certification Pipeline**

limited write
· full write
Approval
workflows:
"high-risk
writes →
manager
approval"
Usage quotas &
budget caps

4 **Activate in Webex Cloud**

Agent deployed
in isolated
container
Zero-trust
identity layer
controls all
API calls
Network
policies:
egress
filtering,
rate limits

5 **Pilot Rollout**

Rolls out to
pilot group
first ·
Measures: time
saved · ticket
rate · user
satisfaction

6 **Monitor Agent Activity**

Per-agent
dashboard:
invocations ·
success rate ·
errors
Usage by org /
team / user
Real-time
anomaly alerts
from Splunk

4 **Agent Detects Intent & Drafts**

Detects: task intent from
transcript
Pulls: Jira project · sprint ·
assignee context
Drafts: full ticket inline in Webex
UI

5 **In-Meeting Approval Card**

User sees complete draft · Options:
✓ Approve ✎ Edit ✗ Reject

6 **On Approval — Agent Executes**

Authenticated API call to
Jira/Salesforce/DocuSign/ServiceNow
· Splunk logs full chain

7 **Webex Confirms in Chat**

"Jira ticket WEBAPP-2026-347
created. Assigned to Sarah Chen.
Priority: High."

CERTIFICATION /
EXECUTION

Static code analysis:
vulnerabilities
· backdoors ·
data-leak
patterns
Permission
review:
declared vs
actual data
access
Performance:
latency ·
memory · CPU ·
recovery
Compliance:
SOC2 · HIPAA ·
FedRAMP · GDPR

Live Agent Examples

Jira Sprint Agent
Salesforce Update Agent
DocuSign Flow Agent
ServiceNow Incident Agent

ALL AGENT ACTIVITY FLOWS INTO SPLUNK OBSERVABILITY LAYER

D · SPLUNK OBSERVABILITY & GOVERNANCE – MONITORING ALL THREE LANES IN REAL TIME

Real-Time Metrics

Anomaly Detection

Governance

Billing & Revenue

Agent invocations per hour
Success / error rate per agent
API latency percentiles
Usage by org / team / user
Active agent count

Unusual data-access volume
Permission scope violations
Performance regression alerts
Unauthorized API call attempts
Cross-tenant data leak flags

Controls

Instant kill-switch per agent
Full audit trail retained
Policy enforcement rules
Manager approval routing
Compliance report export

Usage tracked per agent
Pay-per-use or subscription
70/30 revenue split
Cisco : Developer share
Monthly invoice generation

DEVELOPER PLATFORM

Webex AI Agent Dev Portal
Python / JS SDK
Webex Meeting API
A2A Protocol support
Sandbox environment
Certification submission UI
Developer analytics dashboard

SECURITY & COMPLIANCE STACK

Cisco Zero Trust Identity Layer
Isolated container execution
Static code analysis pipeline
SOC2 · HIPAA · FedRAMP · GDPR
Cisco Verified Agent badge
Splunk SIEM integration
Network egress policy enforcement

USER EXPERIENCE LAYER

Webex AI Agents tab (store UI)
In-meeting agent suggestions
In-meeting approval cards
"AI" labeling on all agent actions
My Agents management panel
Per-agent permission transparency
Webex chat confirmation threads
